

Part 2: Working with Figures

Connected Figures

Here we have a simple text figure.

If an existing figure is selected or is being editing and you hold Command and click anywhere on the idea space then another figure with the same style will be created along with a line connecting them. Instant flowcharts!

If Command-Shift is held then you will get a double-arrow connecting the figures.

If Command-Option-Shift is held you will get a dotted connecting line. All these lines are normal line figures so they can be customized!

If Command-Option is held then you will get a connecting line with no arrows.

You can also connect existing figures! Start dragging this figure towards another and hold one of the Command key combinations then release the mouse.
