Exchange Manipulator
Single User	$1,599.95
Additional Single User	$79.96
Additional 10 Users	$719.64
Additional 25 Users	$1,619.19

System Requirements:
(System requirements are subject to change without notice. Please consult the web site for the latest information.)

- Windows® 7/8
- Microsoft® Outlook 2003, 2007, 2010 or 2013
- FileMaker® Pro 10 through 14

The plug-ins are now available as 32-bit or 64-bit. The plug-in bit version that you use depends upon your FileMaker Pro bit version and the bit version of Microsoft Outlook. All applications need to be running in the same bit version. However, 32-bit applications and 32-bit plug-ins will work on a 64-bit operation system.

Updated: 6/19/15

The Outlook family of plug-ins provide a bi-directional data exchange between FileMaker® Pro, Microsoft® Outlook and Microsoft® Exchange. From suppressing the Outlook security dialog to pushing/pulling data to and from Outlook, one of our plug-ins is just right for your needs.

The first option in the Outlook plug-in family allows FileMaker Pro to send plain text or HTML formatted e-mail with multiple attachments through Microsoft Outlook while suppressing the Outlook security dialog. By using the plug-in you can send better looking e-mail campaigns faster and with less frustration.

The second option in the Outlook plug-in family allows an exchange of data with Microsoft Outlook Contacts, Calendar, Tasks, Mail, Notes and Journal for the "user's" default folder, and public/shared folders within the Exchange Environment. By using this plug-in your users can become more efficient through the elimination of double entry. As information gets entered into your FileMaker database during the day your users' Outlook folders are updated. This allows the ability to synchronize data with mobile devices such as iPhone, Droid, or Blackberry.

The final option in the Outlook plug-in family has all the same features as the previous two plug-ins but this version also gives you the added power to communicate with any Exchange mailbox. Not only can you automate the data import/export process from a single client, but you also gain the ability to send e-mail "On Behalf Of" or "From" another user.

Creating Efficiency Through Automation

Why Microsoft Automation?

OL
Automation

Outlook SendMail Allows:

Mass Mailings - Outlook Security Dialog Suppression:
When using the Outlook Manipulator to send mass e-mail campaigns you are able to suppress the security dialog that Outlook puts up.

Multiple Attachments and HTML Formatted E-mail:
Send HTML formatted e-mail from FileMaker with multiple attachments.

Outlook Manipulator Allows: (has the above features plus)

Leverage Outlook's Mail Filtering Capabilities:
Clean your e-mail of spam, viruses, personal messages, and mail list postings. Once the mail is clean you can use the Outlook Manipulator to parse messages into FileMaker for a complete archive and correspondence history.

Central Contact and Mail Repository:
Centralize and standardize your entire company's Outlook contact list by using FileMaker Pro and Outlook Manipulator. Archive all e-mail messages to and from customers and vendors into a FileMaker Pro database that the entire company can access. Have a complete customer correspondence history available to all employees, and view emails directly from FileMaker.

Send Mail "On Behalf Of":
You have the ability to send e-mail "On Behalf Of" or "From" another user.

Calendar, Notes and Task Integration:
Push/Pull all your FileMaker events into Outlook so that you can view them the way your users expect to. Month, Week, and Day views are already built in to Outlook. Push/Pull your Tasks and Notes from your FileMaker database to Outlook, thus allowing users to sync their mobile devices such as iPhone, Droid, or Blackberry. Set pop-up reminders in Outlook so notifications can be received while working in your FileMaker database.

Meeting Requests:
Invite attendees to an appointment directly from FileMaker, create a distribution list, or add an e-mail to a distribution list. You can send meeting requests to required or optional attendees. Respond to meeting requests directly from FileMaker.

Exchange Manipulator Allows: (has the above features plus)

Exchange Data with Microsoft Exchange:
Larger enterprise organizations can now push or pull data between FileMaker and Exchange via Outlook. Access any exchange mailbox for any user in the system.
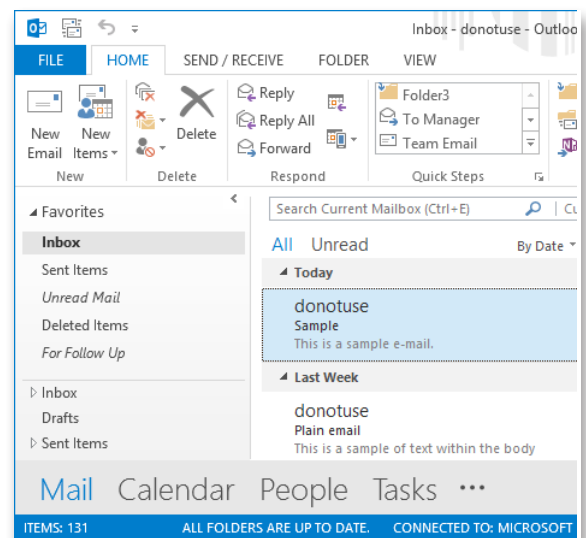

Exchange Data with Mobile Device(s):
Many mobile devices have the ability to sync their mail, contact, calendar and task software with Outlook. With Outlook Manipulator or Exchange Manipulator you can push FileMaker data to Outlook allowing your mobile devices to sync with Outlook. Now you can take all your FileMaker data on the road.

Plug-in Information:
Successful integration of FileMaker plug-ins requires the creation of integration scripts within your FileMaker solution. A working knowledge of FileMaker Pro, especially in the areas of scripting and calculations is necessary. If after review of PCI's overview videos, sample scripts, and documentation you find that you need assistance, please contact us or fill out a Request For Quote.
